Better ideas for the real world 

TurboShears for Automotive

Introducing the Malco family of metal-cutting TurboShears for autobody repair.

Since the TurboShear was first introduced in 2003, Malco has kept autobody repair and restoration front of mind as the TurboShear concept has evolved.

The original 20-gauge (0.91 mm) capacity model **TS1 TurboShear Drill Attachment** is an amazing value and has paved the way for

even more TurboShear cutting applications and improvements for the autobody pro.

The introduction of the 18-gauge (1.22 mm) TurboShear was a milestone addition with the availability of both a heavy-duty one hand operation Drill Attachment as well as an air-powered option.

Continued on page 2 ▶

TurboShears for Automotive *Continued from page 1*

TSHD1

The model **TSHD1** now features a streamlined, aluminum cast shear head and molded polymer drill clamp for greater portability, work access, balance and control.

TSHD1

The telescoping drill clamp fits any corded or cordless drill, including smaller bodied lithium-ion battery powered units and air drills.

TSHD1A1

The versatile **TSHD1A1**, stand-alone, air-powered TurboShear features the same aluminum head design combined with an ultra compact pneumatic motor housing, for outstanding accessibility and control at high to low speeds.

TSHD1A1

This air-powered TurboShear is compatible with virtually any existing shop air supply and comes completely assembled and ready for service.

Both of these 18-gauge (1.22 mm) capacity models use the same long lasting straight and left-cutting blades which are also easily replaced on the job.

And now, there's an ultimate TurboShear solution that collision repair and restoration specialists can call their own. A dedicated 16-gauge (1.52 mm) capacity Autobody TurboShear.

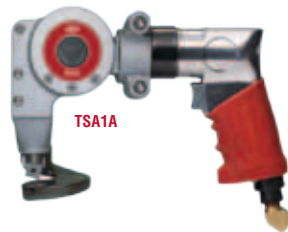

TSA1

Available as either a drill attachment model **TSA1** or air-powered model **TSA1A**, this latest TurboShear innovation makes easy straight, left and right cuts in a full range of 16 to 26-gauge (1.52 to 0.46 mm) automotive steel, including trunk pans and floor boards!

TSA1

TSA1A

TSA1A

A 5-position, 0 to 90 degree adjustable head makes these TurboShears extremely maneuverable for cutting through profiles and tight spaces.

These 16-gauge (1.52 mm) TurboShears use identical 4-sided cutting inserts. The inserts are easily accessible for clearance adjustment, rotation and, eventually, replacement without disassembly of the shear head casings.

For all of your customers' shearing needs – quarter panels, rocker panels, trunk pans, floor boards, profiles, layered metal, even thick plastic bumpers – you can count on a TurboShear solution.

Guaranteed To Take Sales Performance "To The RedLine"

Malco RedLine handled tools maximize the powerful leverage of compound head-to-handle linkage. An optimized handle opening provides sure gripping power. Ergonomic contours and finger stops, plus a soft-touch, over-molded, non-slip handle insert minimizes recoil and ensures comfort and control for any way your customer needs to work—even when holding the tool upside down! One-hand operation, including a durable, easy-open/easy-close ambidextrous latch design, always leaves a hand free to steady the work piece.

CHECK OUT THESE TOOLS!

Seamers

Forged steel jaws with compound linkage and superior RedLine handle leverage. Jaw bending depths are graduated in 1/4-in (6 mm) increments.

S2R – 3-1/4" W x 1-1/4" D (83 x 31.8 mm) Jaws

S3R – 3-1/4" W x 1-1/4" D (83 x 31.8 mm) Offset Jaws

S6R – 6" W x 1-1/4" D (152 x 31.8 mm) Jaws

One-Inch Notcher

The N2R Notcher punches a big 1-in (25.4 mm) deep "V" notch in common 24 to 30 (0.71 to 0.41 mm) gauge galvanized sheet metal quickly and easily. Features compound linkage and superior RedLine handle leverage.

N2R – 3-1/4" W x 1-1/4" D (83 x 31.8 mm) Jaws

Track Malco Orders **ONLINE!**

Malco's 24/7 online customer service option puts order information at your fingertips with the convenience of your own computer.

And now you can track shipments via links to UPS and most other carriers! You can also go online to verify purchase order numbers, dates and terms as well as review details including: items, quantities, discounts, shipping updates, invoice numbers, and a 60-day order history.

Go to www.malcotools.com and click the distributor button to get your password for 24/7 customer service, online!

SHOW UPDATES

HOTROD & RESTORATION

14th Annual Hotrod & Restoration Trade Show

March 23 – 24, 2011
Lucas Oil Stadium
Indianapolis, IN
www.hotrodshow.com

TurboShear demonstrations were a hit for the second straight year!

NACE

30th Annual International Autobody Congress & Exposition

October 6 – 8, 2011
Orange County Convention Center Orlando, FL
www.naceexpo.com

2011 marked a return to NACE and the introduction of redesigned 18-ga TurboShear Drill Attachment model TSHD1 and Air-Powered model TSHD1A1!

SEMA

Specialty Equipment Market Association Show, 2011

November 1 – 4, 2011
Las Vegas Convention Center
Las Vegas, NV
www.semashow.com

Malco's second year exhibiting at SEMA is memorable with the introduction of a 16-ga capacity "automotive" TurboShear available as either a Drill Attachment model TSA1 or Air-Powered model TSA1A!
